

The Planets

Mercury is painted in a variety of different greys

One rotation taking 58 Earth days.

Venus is the colour of sandy yellow

Its volcanoes grow bigger as they bellow.

Earth, the planet we live on

It has a moon, but just the one

Mars has a volcano that dwarfs Everest three

Dunes pattern the landscape on plains of ice.

Jupiter has the most powerful magnetic field of all

Raging winds and clouds create storms that are not small.

Saturn, lord of the rings it commands many moons

Its rings are striped like the tails of racoons

Uranus spins on its side

Water and ice collide.

Neptune where wind and storms rage

A sea of liquid diamonds in an icy cage.
